Milan Bairagi | Full Stack Developer

+977 9749929106 • meelanbairagi@gmail.com • github.com/milanbairagi • linkedin.com/in/milan-bairagi

PROFILE SUMMARY

Full Stack Developer experienced in building web applications using **Django and React**. Specialized in zero-knowledge encrypted systems, real-time communication, and responsive UI design. Proven ability to architect secure authentication pipelines, implement WebRTC peer-to-peer connection, WebSocket-based messaging, and deliver polished user interfaces. Strong foundation in OOP, database design, and modern DevOps practices.

PROJECT EXPERIENCE

LockLeaf | Secure End-to-End Encrypted Password Manager | GitHub

A zero-knowledge password manager with a Django backend and React Chrome extension frontend.

- Built a full-stack password manager with zero-knowledge architecture, ensuring plaintext passwords never leave the browser
- Implemented client-side AES encryption using a key derived from the master password and a per-user salt
- Designed secure JWT authentication pipeline where backend remains blind to actual master password
- Developed Chrome extension in React that fetches encrypted blobs, decrypts locally, re-encrypts before writes, and sync with server.
- Architected Django backend responsible for authentication, per-user salt management, and blob storage
- Tech Stack: Django, Django REST Framework, React, Web Crypto API, PostgreSQL, JWT

WaveLine | Real-Time Web & Mobile Chat Platform | GitHub

Cross-platform messaging application featuring real-time chat, presence tracking, read receipts, and audio/video calling.

- Built real-time messaging pipelines using WebSockets for chat, user presence tracking, and read receipts.
- Integrated WebRTC audio/video calling into the Expo mobile application for real-time peer-to-peer communication.
- Optimized database performance and reduced redundant queries using Redis server-side caching.
- Implemented secure JWT authentication with automated token refreshing using Axios.
- Developed responsive web interfaces using React, Vite, Tailwind CSS, and React Router DOM.
- Designed RESTful APIs using DRF and real-time communication infrastructure using Django Channels.
- Containerized application services using Docker for consistent deployment.
- **Tech Stack:** Django, Django REST Framework, Django Channels, React, React Native, Expo, WebRTC, WebSockets, Redis, JWT, Axios, Tailwind CSS, Docker

EstateEase | Real Estate Platform for Listing & Property Management | GitHub

A full-stack web application for listing, filtering, renting, and selling properties with integrated messaging.

- Built full-stack platform where users can list, search, and manage properties with dynamic filtering
- Implemented secure messaging system for direct inquiries between buyers and property owners
- Designed user-friendly dashboard for managing property listings, messages, and account preferences
- Developed responsive UI with Tailwind CSS and optimized database queries for search performance
- Implemented JWT-based authentication with secure session management
- Tech Stack: Django, Python, React, Axios, JWT, Tailwind CSS, PostgreSQL, HTML/CSS

SKILLS

- **Language**: Python, JavaScript, HTML, CSS, C, C++
- **Frontend**: React, React Native, Tanstack Query, Tailwind CSS, Axios, HTML, CSS
- **Backend:** Django, Django Rest Framework (DRF), Django Channels, Celery
- **Databases**: PostgreSQL, MySQL, Redis, SQLite
- **Tools & DevOps**: Git, GitHub, Docker, Azure, CI/CD, Nginx, WebSocket, WebRTC, Authentication, Testing

EDUCATION

Bachelor in Information Technology Nov 2023 – Nov 2027

Amrit Campus, Tribhuvan University

- Coursework: Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), Database Management Systems (DBMS), System Design & Architecture, Web Technology, Information Security
